

1 **THE EMBODIMENTS OF THE INVENTION IN WHICH AND**
2 **EXCLUSIVE PROPERTY OR PRIVILEGE IS CLAIMED ARE DEFINED AS**
3 **FOLLOWS:**
4

5 1. A system for improving compliance in a pediatric population for
6 the use of ventilation masks and headgear and providing size recognition
7 comprising:

8 a plurality of masks and headgear of predetermined known matched
9 and serial sizes so as to fit a range of pediatric patients; and

10 a size indicator being a predetermined visage of a caricature
11 represented on each of the plurality of masks, each caricature being predetermined
12 to represent one of each of the plurality of sizes.

13
14 2. The system as described in claim 1 wherein each mask further
15 comprises:

16 a concave shell having
17 at least one flexible cuff attached about a periphery of the shell and
18 having an opening for receiving a patients nose or nose and mouth;

19 a port in the shell for receiving a tubing for attachment to a ventilation
20 device;

21 at least one exhalation port; and

22 means for attachment to a headgear.

1 3. The system as described in claim 1 wherein the shell further
2 comprises at least one other port having a removable cap.

3
4 4. The system as described in claim 1 wherein the headgear
5 comprises:

6 a cap; and

7 a plurality of straps, each strap being attached to the headgear at a
8 first end and having means for attachment to the mask at a second end.

9
10 5. The system as described in claim 4 wherein the means of
11 attachment of the headgear straps to the mask comprise:

12 a plurality of raised buttons located at the periphery of the mask shell;

13 and

14 a shaped slot formed in the second end of each strap for retaining the
15 button.

16
17 6. The system as described in claim 5 further comprising:

18 a first headgear strap is attached from a peak in the cap over the
19 bridge of the nose to a top of the mask shell so as to not impair vision; and

20 second and third headgear straps extending outwards in opposing
21 directions from a neck edge of the cap to attach to buttons on a first and second side
22 of the mask shell.

1 7. The system as described in claim 3 wherein the headgear
2 further comprises a chin strap so as to prevent mouth leaks.

3
4 8. The system as described in claim 1 wherein the caricature on
5 the mask is an animal face.

6
7 9. The system as described in claim 4 further comprising a
8 matching aspect, further identifying the caricature, attached to the headgear.

9
10 10. The system as described in claim 4 further comprising ears
11 attached to the headgear.

12
13 11. The system as described in claim 10 wherein the ears match
14 the caricature.

15
16 12. The system as described in claim 9 wherein the matching
17 aspect is ears.

18
19 13. The system as described in claim 8 wherein there are two
20 exhalation ports, the exhalation ports forming part of a nasal feature of the animal
21 face.

1 14. A system for improving compliance in a pediatric population for
2 the use of ventilation masks and headgear and providing size recognition
3 comprising:

4 a plurality of masks and headgear of predetermined known matched
5 and serial sizes so as to fit a range of pediatric patients wherein:

6 the mask further comprises a concave shell; at least one flexible cuff
7 attached about a periphery of the shell and having an opening for receiving a
8 patients nose or nose and mouth; a port in the shell for receiving tubing for
9 attachment to a ventilation device; at least one exhalation port; and means for
10 attachment to the headgear; and

11 the headgear comprises a cap and a plurality of straps having means
12 for attachment to the mask; and

13 a size indicator being a predetermined visage of a caricature
14 represented on each of the plurality of masks, each caricature being predetermined
15 to represent one of each of the plurality of sizes.

16
17 15. The system as described in claim 14 wherein the mask shell
18 further comprises at least one other port having a removable cap.

1 16. The system as described in claim 14 wherein the means of
2 attachment of the headgear straps to the mask comprise:

3 a plurality of raised buttons located at the periphery of the mask shell;
4 and
5 a shaped slot formed in the second end of each strap for retaining the
6 button.

7
8 17. The system as described in claim 14 further comprising:

9 a first headgear strap is attached from a peak in the cap over the
10 bridge of the nose to a top of the mask shell so as to not impair vision; and

11 second and third headgear straps extending outwards in opposing
12 directions from a neck edge of the cap to attach to buttons on a first and second side
13 of the mask shell.

14
15 18. The system as described in claim 14 wherein the headgear
16 further comprises a chin strap so as to minimize mouth leaks.

17
18 19. The system as described in claim 14 wherein the caricature on
19 the mask is an animal face.

20
21 20. The system as described in claim 14 further comprising a
22 matching aspect, further identifying the caricature, attached to the headgear.

1 21. The system as described in claim 20 wherein the matching
2 aspect is a set of ears.

3
4 22. The system as described in claim 19 wherein there are two
5 exhalation ports, the exhalation ports forming part of a nasal feature of the animal
6 face.

7
8 23. A mask for improving compliance in a pediatric population and
9 providing size recognition for use with ventilation therapy, the mask comprising:

10 a concave shell having an outer periphery and having a size selected
11 from a plurality of predetermined sizes;

12 at least one flexible cuff attached to the shell about the periphery and
13 having an opening so as to receive a patient's nose or nose and mouth;

14 at least one port in the shell for receiving tubing;

15 at least one exhalation port; and

16 a size indicator, the indicator being indicia representing one of a
17 plurality of caricatures, each caricature predetermined to represent one of the
18 plurality of predetermined sizes.

19
20 24. The mask as described in claim 23 wherein the caricature is an
21 animal face.

1 25. The mask as described in claim 23 further comprising a second
2 inflatable cuff attached within the periphery of the shell and within the flexible cuff.

3
4 26. The mask as described in claim 23 wherein the at least one
5 flexible cuff is removable and replaceable.

6
7 27. The mask as described in claim 23 further comprising at least
8 one additional port having a cap so as to administer additional inhalation gases or
9 monitor exhalation gases.

10
11 28. The mask as described in claim 23 further comprising a
12 compression slip ring to retain the tubing to the shell.

13
14 29. The mask as described in claim 23 wherein the shell is
15 transparent.

16
17 30. The mask as described in claim 24 wherein there are two
18 exhalation ports, the exhalation ports forming part of a nasal feature of the animal
19 face.

1 31. A mask for use with ventilation therapy, the mask comprising:
2 a concave shell having an outer periphery;
3 a flexible exterior cuff attached to the shell about the periphery and
4 having an opening so as to receive a patient's nose or nose and mouth;
5 an inflatable interior cuff attached to the shell and positioned inside the
6 exterior cuff, the inflatable cuff further comprising a valve port extending through the
7 shell and in fluid communication with the inflatable cuff;
8 at least one exhalation port; and
9 at least one port in the shell for receiving tubing.

10
11 32. The mask as described in claim 31 having a removable exterior
12 cuff, the mask further comprising:

13 a lip formed about the periphery of the shell for forming a space
14 between the shell and the lip; and

15 an exterior cuff having a flexible compressible edge, the edge sized
16 slightly larger than the space so as to be fit in the space when compressed and
17 retained therein.

18
19 33. The mask as described in claim 31 further comprising at least
20 one additional port having a cap so as to administer additional inhalation gases or
21 monitor exhalation gases.
